## 2. Model

## 3. Wiring Diagram

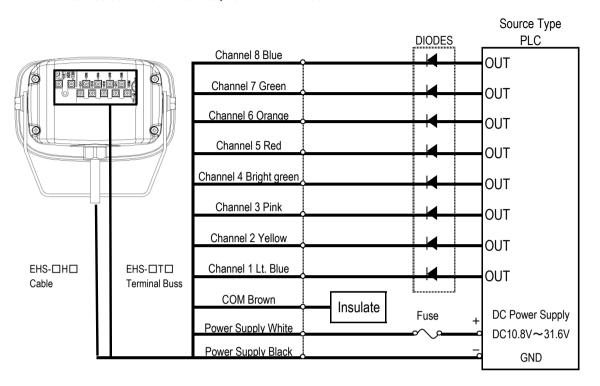

- \* Each channel color is indicated by the cable or lead wire.
- \* Voltage contact input should be in the range of DC10.8 V to DC31.6 V.
- \* When using the Terminal type model, round terminals with M3 insulated coating is recommended when wiring to the Terminal.

Recommended Parts: J.S.T. Manufacturing Co., Ltd. N1.25-3 (article corresponding to RoHS)

Drawing No.	Rev.	Page
EHV-W18	I	5/19

When connecting a Source-type PLC, be sure to insert a diode as indicated in the drawing below. Failure to insert a diode will lead to possible malfunction.

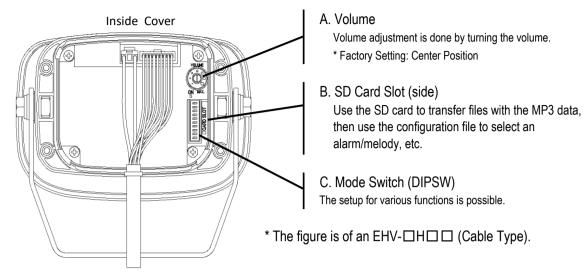

★Select a diode with ratings indicated below.

Forward Current	50mA or more
Reverse Voltage	50V or more

Drawing No.	Rev.	Page
EHV-W18	I	6/19

(6) Forced Playback	Forced Playback ON/OFF	Pofor to "5 0. Forced Playback "	
(7) Tone Selection	Playback Sound Selection	Refer to "5-9. Forced Playback."	

## **PATLITE** Corporation

Drawing No.	Rev.	Page
EHV-W18	I	7/19

## 5. Functionality Details

## 5-1. Sound Group

When "(5) MP3 setup" switch is being turned OFF, the sound group can be selected from up to 16 variations from groups A-P with the Mode Switch (DIPSW).

A sound group cannot be selected when "(2) channel input method" is set for binary.

Refer to "7. sound list" for the Mode Switch (DIPSW) and sound group combination which can be selected.

## 5-2. Channel Input Method

Channel input mode can be selected for bit/binary with the Mode Switch (DIPSW). With the bit input, channels 1-8 can be used to reproduce up to eight channels. With the binary input, channels 1-6 can be used to reproduce up to 63 channels.

	Bit	Binary	
F	Factory Setting:EHV-□□□ EHV-□□□M	 Bit Specified Messages Less than 8:E Specified Messages greater than 9:1

<sup>\*</sup> Factory Setting: Group A

Drawing No.	Rev.	Page
EHV-W18	I	8/19

#### 5-3. Playback Mode

The Mode Switch (DIPSW) can select from four different kinds of playback modes. When "(5) MP3 setup" is OFF, the hold playback function is active, regardless of the Mode Switch position.

	<b>1</b> 9	<u></u>	9
Normal Playback	Input Priority Playback	Hold Playback	Memory Playback

<sup>\*</sup> Factory Setting: Normal Playback

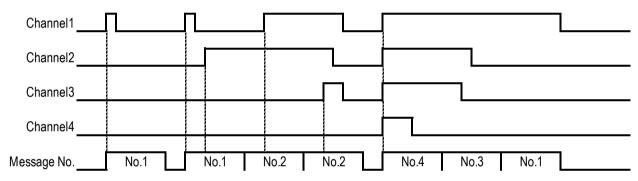

#### - Normal Playback

If a signal input (Playback) is a pulse input, playback is ended as soon as the pulse input is off.

The signal input (Playback) is maintained only when the input is held on.

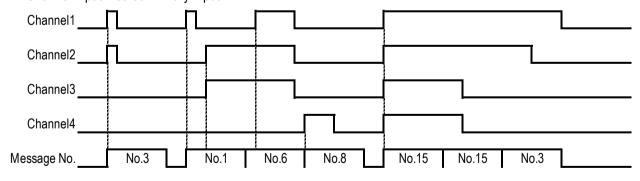

The signal input (Playback) becomes invalid during playback.

- Channel Input Method : Bit Input

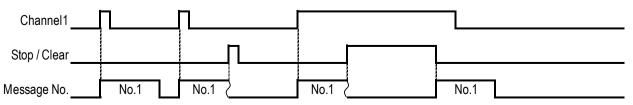

<sup>\*</sup>All channels above 5 are the same

Channel Input Method : Binary Input

<sup>\*</sup>All channels above 5 are the same

During a Stop/Clear Input

<sup>•</sup> The wavy line indicates when playback is stopped.

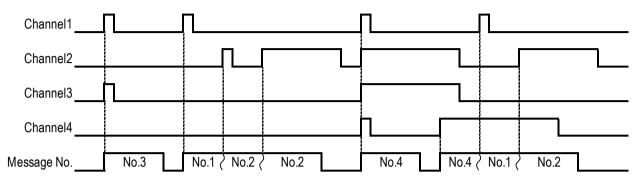

Drawing No.	Rev.	Page
EHV-W18	I	9/19

## - Input Priority Playback

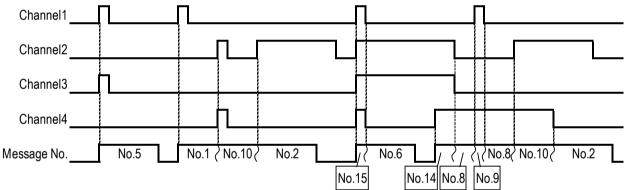

When a signal input (Playback) is on during playback, the playback is stopped and the channel from the signal input (Playback) is reproduced.

If the signal input (Playback) is a pulse input, even with the input held, playback plays only once.

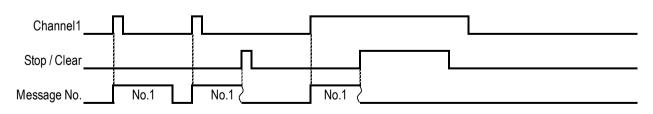

- Channel Input Method : Bit Input

- \* All channels above 5 are the same
- \* The wavy line indicates when playback was stopped and the message No. which was the priority signal input (Playback) is played.
- Channel Input Method : Binary Input

- \* All channels above 5 are the same
- \* The wavy line indicates when playback was stopped and the message No. which was the priority signal input (Playback) is played.
- During a Stop / Clear Input

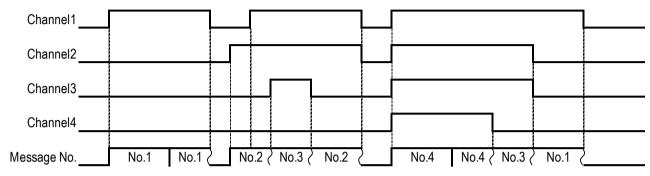

<sup>\*</sup> The wavy line indicates when playback is stopped.

Drawing No.	Rev.	Page
EHV-W18	I	10/19

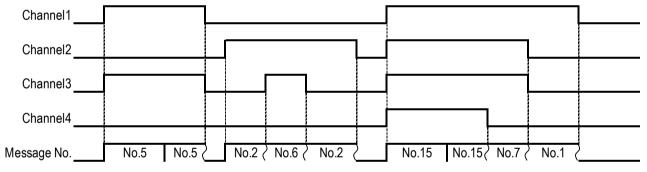

## - Hold Playback

It only plays back while the signal input (Playback) is maintained. Playback is stopped when the signal input (Playback) is removed. Repeated playback is done by maintaining a signal input (Playback). It does not play back if a signal input (Playback) is a pulse input.

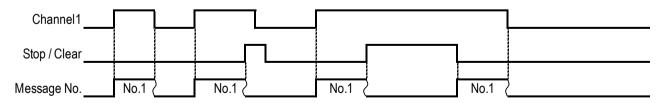

- Channel Input Method : Bit Input

- \* All channels above 5 are the same
- \* The wavy line indicates when playback was stopped and the message No. which was the changed signal input (Playback) is played.
- Channel Input Method : Binary Input

- \* All channels above 5 are the same
- \* The wavy line indicates when playback was stopped and the message No. which was the changed signal input (Playback) is played.
- During a Stop / Clear Input

\* The wavy line indicates when playback is stopped.

Drawing No.	Rev.	Page
EHV-W18	I	11/19

## - Memory Playback

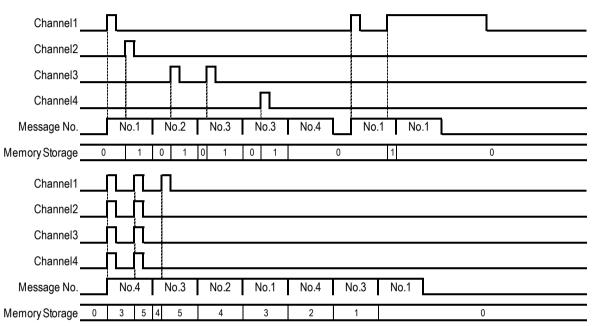

When several signal inputs (Playback) are entered during playback, the memory of up to 5 signal inputs will play the corresponding message No.

Signal inputs beyond the memory capacity is ignored.

When playback is ended, the next available channel stored in memory will play.

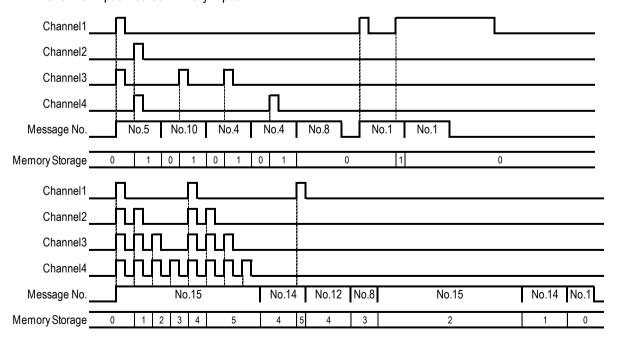

If the signal input (Playback) is a pulse input, even with the input held, the next message in memory is played back only once.

## - Channel Input Method : Bit Input

<sup>\*</sup> All channels above 5 are the same

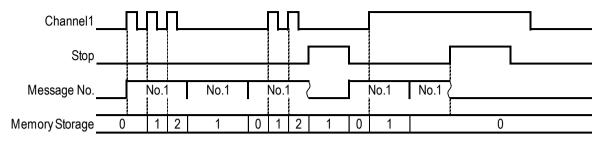

#### - Channel Input Method : Binary Input

<sup>\*</sup> All channels above 5 are the same

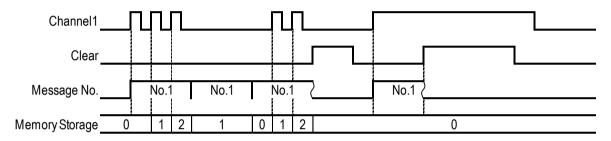

Drawing No.	Rev.	Page
EHV-W18	I	12/19

## - During a Stop input

<sup>\*</sup> The wavy line indicates when playback is stopped.

## - During a Clear input

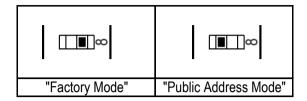

<sup>\*</sup> The wavy line indicates when playback is stopped.

Drawing No.	Rev.	Page
EHV-W18	I	13/19

## 5-4. Sound Mode

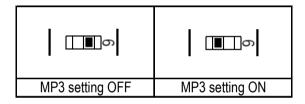

The alarm/melody audibility reprodution can be selected with the Mode Switch (DIPSW).

- Factory Mode -- The audible sound is suitable as a warning alarm.
- PA Mode -- The audible sound is suitable for public announcements.
- \* Factory Setting: "Factory Mode"

## 5-5.MP3 Set up

The MP3 can be selected for ON/OFF with the Mode Switch (DIPSW).

- MP3 setup ON ... MP3 data + Alarm/Melody
  - MP3 data and alarm/melody data can be freely combined.
  - MP3 data can be freely written, using an SD card.
  - An alarm/melody can be selected from the built-in sounds.
  - Registration of MP3 data, and a select and registration of an alarm melody are exclusive software (PATLITE Playlist Editor 2). It carries out by using it.
  - Playback modes can be selected.
- MP3 setup OFF ... Alarm/Melody
  - The alarm/melody can be selected among the built-in sounds.
  - The 63 sounds are divided and registered into 16 kind of groups.
  - A sound group is selected with the Mode Switch (DIPSW).
  - The Playback mode is made into the hold playback mode.

Factory Setting:	EHV-	MP3 setup OFF
	FHV-□□□M	MP3 setup ON

Drawing No.	Rev.	Page
EHV-W18	I	14/19

## 5-6. MP3 Data Rewriting

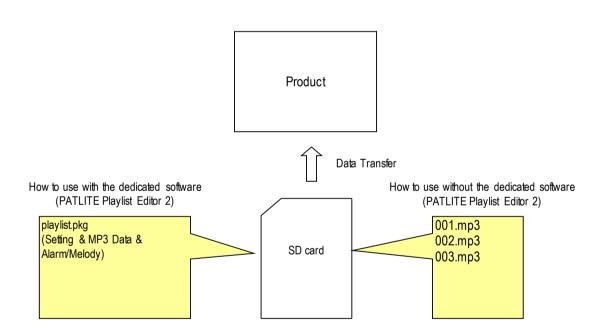

With the optional SD Card, MP3 data can be freely rewritten.

Rewriting MP3 data requires the use of dedicated software (PATLITE Playlist Editor 2)

and designating a regular file name.

The built-in alarm/melodysounds are not overwritten.

Item	When the dedicated software (PATLITE Playlist Editor 2) is used	When the dedicated software (PATLITE Playlist Editor 2) is used				
Playback message No	A maximum of 16 data files (It is combined freely and can playback in order)	One piece of data				
Individual MP3 data settings are made	When setting up sound volume, end of playback blank-time, and Repeat Playback.	Cannot set up manually.				
Channel Assignment Function	When setting up to choose "playback", "sound reduction", "stop", and "clear".	All are assigned for "playback".				

Recommended SD Card: SDV-2GP (option)

Drawing No.	Rev.	Page
EHV-W18	I	15/19

## 5-7. Channel function (Function Which Uses Exclusive Soft "PATLITE Playlist Editor 2")

Dedicated software (PATLITE Playlist Editor 2) can be used to assign functions to each signal input. In order for the channel function assignments to be used, the setup data has to be transmitted to the product via the SD Card.

If the MP3 setup mode is OFF, this function becomes invalid.

#### - Plavback

The corresponding channels are played back.

#### - Sound Reduction

The volume of sound being played back is decreased.

A maximum of two sound reduction channels can be assigned.

When two sound reduction values are set up, three sound reduction levels can be made.

#### - Stop

The channel during playback is stopped.

In the Memory Playback Mode, playback is stopped and the next channel in memory is played next. A playback input is ignored during a STOP input.

#### - Clear

In the memory playback mode, all channels in memory is erased when an input occurs. In other playback modes outside memory playback, the same operation as the stop function occurs.

If simultaneous inputs for CLR and STOP occurs, priority is given to the CLR input. When channels are assigned for sound reduction, STOP, and CLR, the available number of playback channels decrease.

Example: For a maximum number of bit inputs;

channel1 - channel5 => playback
channel6 => sound reduction

channel7 => stop channel8 => clearance

In this case, the available number of playback channels is set to five.

<sup>\*</sup> Factory Setting: channels 1-8 are all set as "Playback".

Drawing No.	Rev.	Page
EHV-W18	I	16/19

## 5-8. Sound Reduction

- (6) When Forced Playback is OFF (the function which uses exclusive soft "PATLITE Playlist Editor 2") Using the dedicated software (PATLITE Playlist Editor 2), If a signal input is assigned with the sound reduction function, the sound level of the message being played back will be reduced. (Refer to "5-7. Channel Assignment Function")

The input state for sound reduction 1 and sound reduction 2 can be set up for three steps in sound reduction. (-10dB, -20dB, -30dB)

In order for the sound reduction function to be used, the setup data to assign the channel has to be transmitted to the product via an SD card.

Sound Reduction 1	With no input	With an input	With no input	With an input
Sound Reduction 2	With no input	With no input	With an input	With an input
Sound Reduction Level	No Sound Reduction	-10dB	-20dB	-30dB

<sup>\*</sup> Factory Setting: Sound Reduction Function OFF

#### - (6) Forced Playback ON

With a Forced Playback, if a signal line input occurs, the playback sound can be reduced.

The sound reduction level can be selected by the channel input.

Priority rank is channel3>channel2>channel1.

Signal Input Condition	Sound Reduction Volume					
None	No Sound Reduction					
Channel1	-10dB					
Channel2	-20dB					
Channel3	-30dB					

Drawing No.	Rev.	Page
EHV-W18	I	17/19

## 5-9. Forced Playback

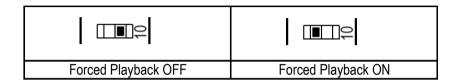

When the Forced Playback mode is turned ON, it will play back after power is supplied, even with no signal input. It can be used for testing the playback volume or when controlled by power supply start-up.

The Forced Playback is selected for ON/OFF with the Mode Switch (DIPSW).

The sound (channel) to play back can be selected by the Mode Switch (DIPSW).

MP3 setting ON: MP3 data and alarm/melody is selected with Mode Switch Numbers 1 - 6.

MP3 setting OFF: Built-in Sounds are selected with Mode Switch Numbers 1 - 6.

<sup>\*</sup> Factory Setting: Forced Playback OFF
